The Straight Through Processing Framework

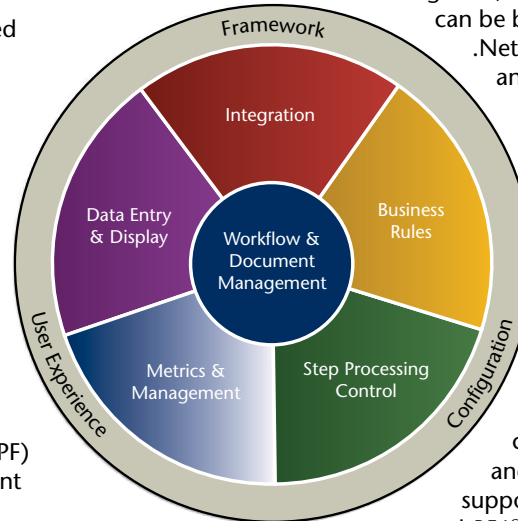

Historically, every business process management (BPM) implementation has been viewed as a separate project – designed, developed, and implemented as a discrete solution – with little consideration for reuse. Each project involved a significant amount of custom programming and software development, with all of the associated time, expense, and risk.

In response, Crowe invested 12 months and more than 30,000 staff hours to develop a reusable framework that enables BPM implementations through configuration rather than application programming. Our goal is to provide rapid application development and implementation with less risk.

The Straight Through Processing Framework (STPF) creates a single environment that encompasses:

- A consistent, configurable user interface for all transactions;
- Business process management (supports *FileNet*® and *IBM*®);
- Enterprise content management (supports *FileNet* and *IBM*);
- Business rules (supports *Corticon*®, *ILOG*®, and other major vendors);

- Electronic forms (supports *Adobe*®, *FileNet*, and other major vendors);
- Enterprise integration;
- Notifications;
- Configuration tools.

Using STPF, an entire BPM application can be built without *Java*® or *.Net* programming. Business analysts can perform much of the development and maintenance, thereby reducing the demands on programming staff.

Our framework is built on the latest technologies. Written completely in *J2EE* with *JavaServer*™ *Faces* and the *Spring Framework*, *CSTP* has excellent configurability, scalability, and support. The framework supports *IBM WebSphere*® and *BEA*® *WebLogic*® servers, and *Microsoft*® *SQL Server*®, *IBM DB2 UDB*®, and *Oracle*® databases. It can be configured to support the *JSR168* portal standard and also to execute outside a portal environment.

Each Crowe straight through processing solution uses this framework as a foundation to deliver the benefits of BPM more quickly and with less risk. To understand the potential gains for your organization, please contact **Dave Keever** at **317.706.2669** or **dkeever@crowechizek.com**.
